System SourceMeter® Instruments

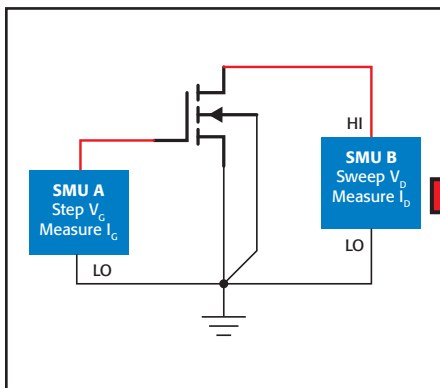

See page 26 for Model 2651A Single-Channel System SourceMeter Instrument (High Power)

- Combines a power supply, true current source, 6½-digit DMM, arbitrary waveform generator, V or I pulse generator with measurement, electronic load, and trigger controller – all in one instrument
- Family of products offers wide dynamic range: 1fA to 50A and 1µV to 200V
- 20,000 rdg/s provides faster test times and ability to capture transient device behavior
- Precision timing and channel synchronization (<500ns)
- USB port for saving data and test scripts
- LXI Class C compliance supports high speed data transfer and enables quick and easy remote testing, monitoring, and troubleshooting
- Software:
 - TSP® Express for quick and easy I-V test (embedded)
 - ACS Basic Edition for semiconductor component characterization (optional)

Series 2600A System SourceMeter instruments are Keithley's latest I-V source measurement unit (SMU) instruments for use as either bench-top I-V characterization tools or as building block components of multi-channel I-V test systems. For bench-top use, Series 2600A instruments feature an embedded TSP Express Software Tool that allows users to quickly and easily perform common I-V tests without programming or installing software. For system level applications, the Series 2600A's Test Script Processor (TSP) architecture, along with other new capabilities such as parallel test execution and precision timing, provides the highest throughput in the industry, lowering the cost of test. To simplify the testing, verification, and analysis of semiconductor components, the optional ACS Basic Edition software is also available.

COLLECT Data

Performing nested sweeps to characterize a transistor with TSP Express is quick and easy. Data can be exported to a .csv file for use with spreadsheet applications such as Excel.

Quick and Easy Lab and Bench-Top Use

Each Series 2600A SourceMeter instrument is a complete I-V measurement solution with unmatched ease of use, capability, and flexibility. They simplify the process of making high-performance measurements.

The TSP Express Software Tool quickly sets up and runs basic and advanced tests, including: nested step/sweeps, pulse sweeps, and custom sweeps for device characterization applications. The resulting data can be viewed in graphical or tabular format and exported to a .csv file for use with spreadsheet applications.

TSP Express runs on a PC connected to the SourceMeter instrument via an Ethernet cable (provided with the instrument). The intuitive user interface resides on the built-in LXI web page, so no software installation is needed.

Simplify Semiconductor Component Test, Verification, and Analysis

The optional ACS Basic Edition software maximizes the productivity of customers who perform packaged part characterization during development, quality verification, or failure analysis, with:

- Rich set of easy-to-access test libraries
- Script editor for fast customization of existing tests
- Data tool for comparing results quickly
- Formulator tool that analyzes captured curves and provides a wide range of math functions

For more information about the ACS Basic Edition software, please refer to the ACS Basic Edition data sheet.

Unmatched Throughput and Flexibility for High Performance I-V Test Systems

TSP technology provides remarkable capabilities when a Series 2600A is integrated as part of a multi-channel I-V test system.

For example, the embedded scripting capability allows test scripts to be run by the instrument. Test scripts are complete test programs based on an easy to use but highly efficient and compact scripting language called Lua <www.lua.org>. Since test scripts can contain any sequence of routines that are executable by conventional programming languages (including decision making algorithms), this feature allows entire tests to be managed by the instrument without sending readings back to a PC for decision making. This eliminates the delays caused by GPIB traffic congestion and greatly improves overall test times.

Also, TSP technology offers “mainframe-less channel expansion.” The TSP-Link channel expansion bus (which uses a 100 Base T Ethernet cable) allows multiple Series 2600A and other TSP instruments to be connected in a master-slave configuration and behave as one integrated system. TSP-Link technology supports up to 32 units or 64 SMU instrument channels per GPIB or IP address, making it easy to scale a system to fit the particular requirements of an application.

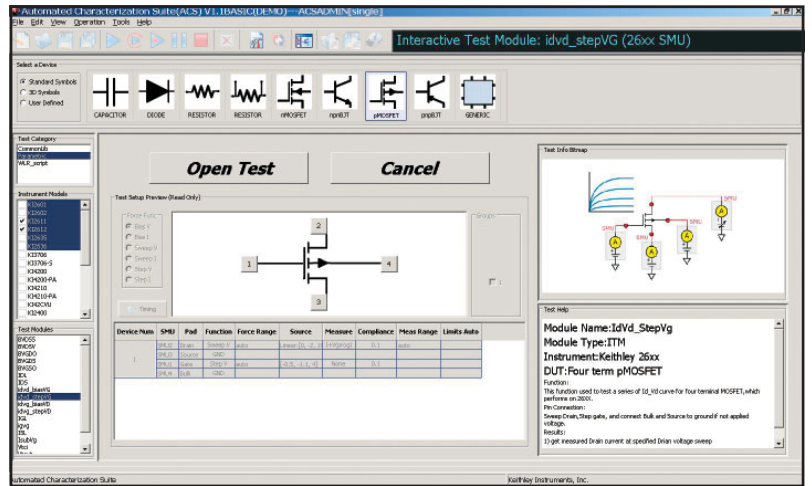

Parallel Test Capability

The Series 2600A takes system level performance to a new height with parallel testing capability. This feature tests multiple devices in parallel to meet the high throughput requirements of production test and advanced semiconductor lab applications.

This parallel testing capability enables each instrument in the system to run its own complete test sequence, creating a fully multi-threaded test environment. Hence, the number of tests that can be running in parallel on a Series 2600A system can be as many as the number of instruments in the system. In contrast, most conventional test systems run a single thread test, usually on the controller

When you need to acquire data on a packaged part quickly, the wizard-based user interface of ACS Basic Edition makes it easy to find and run the test you want, like this common FET curve trace test.

PC instead of the instrument itself. Testing multiple devices at the same time means dramatically improved test throughput and reduced overall cost of test.

When all or some of your test requirements change, your Series 2600A system can be reconfigured via software without rewiring. The internal software can match the different pin layouts of the devices-under-test to the appropriate SMU instrument-per-pin configurations.

Tight Timing and Synchronization

Today's test engineers are challenged with testing increasingly more complex and more sensitive devices that require precise timing and synchronization. Whether you need to synchronize electrical and optical tests for an

optoelectronic component or ensure that the same stress times are applied to the different pins of an advanced semiconductor device, providing precision timing and synchronization between SMU instrument channels (and external instruments) has become a critical requirement.

A high performance trigger model that is hardware driven allows timing at each source-measure step to be tightly controlled. It also synchronizes the operations between SMU instrument channels and/or external instrumentation at hardware speeds of <500ns.

Third-generation SMU Instrument Design Ensures Faster Test Times

Based on the proven architecture of earlier Series 2600 instruments, the Series 2600A's new SMU instrument design enhances test speed in several ways. For example, while earlier designs used a parallel current ranging topology, the Series 2600A uses a patented series ranging topology, which provides faster and smoother range changes and outputs that settle more quickly.

The Series 2600A SMU instrument design supports two modes of operation for use with a variety of loads. In normal mode, the SMU instrument provides high bandwidth performance for maximum throughput. In high capacitance (high-C) mode, the SMU instrument uses a slower bandwidth to provide robust performance with higher capacitive loads.

Each Series 2600A SMU instrument channel offers a highly flexible, four-quadrant source coupled with precision voltage and current meters. Each channel can be configured as a:

- Precision power supply
- True current source
- DMM (DCV, DCI, ohms, and power with 6½-digit resolution)
- Electronic load (with sink mode capability)
- V or I pulse generator (Pulse width: 100μs and longer)
- V or I waveform generator

All analog-to-digital (A/D) converters in Series 2600A instruments are both high speed and high precision for maximum flexibility. The two A/D converters per channel (one for I, one for V) can run simultaneously, providing precise source-readback without sacrificing test throughput. These A/D converters offer the versatility of programmable integration rates, allowing you to optimize for either high speed (>20,000 rdgs/s at 0.001 NPLC setting) or for high resolution (up to 24 bits at 10 NPLC setting) measurements.

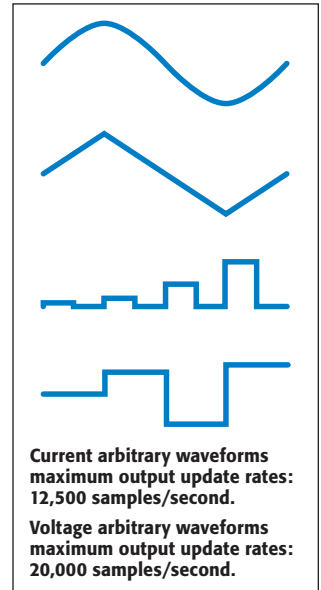

In addition to the high speed or high resolution modes, the Model 2651A offers a digitizing measurement mode that enables 1μs per point sampling. See the Model 2651A on page 26 for more information.

Digital I/O Interface

A back panel port on every Series 2600A instrument provides 14 bits of universal digital I/O to link the instrument to a variety of popular component handlers and/or probe stations. These digital I/O lines are compatible with the triggering technology of Keithley's earlier Trigger-Link instruments. These lines simplify integrating Series 2600A instruments into systems that employ other electrical, mechanical, optical, or RF equipment.

TSP-Link Trigger Lines

The TSP-Link bus supports dedicated trigger lines that provide synchronous operations between multiple Series 2600A instruments (and other TSP instruments, such as Series 3700 DMM/Switch Systems) without the need for additional trigger connections.

A GREATER MEASURE OF CONFIDENCE

TYPICAL APPLICATIONS

I-V functional test and characterization of a wide range of devices, including:

- Discrete and passive components
 - Two-leaded – Sensors, disk drive heads, metal oxide varistors (MOVs), diodes, zener diodes, sensors, capacitors, thermistors
 - Three-leaded – Small signal bipolar junction transistors (BJTs), field-effect transistors (FETs), and more
- Simple ICs – Optos, drivers, switches, sensors
- Integrated devices – small scale integrated (SSI) and large scale integrated (LSI)
 - Analog ICs
 - Radio frequency integrated circuits (RFICs)
 - Application specific integrated circuits (ASICs)
 - System on a chip (SOC) devices
- Optoelectronic devices such as light-emitting diodes (LEDs), laser diodes, high brightness LEDs (HBLEDs), vertical cavity surface-emitting lasers (VCSELs), displays
- Wafer level reliability
 - NBTI, TDDDB, HCI, electromigration
- Solar Cells
- Batteries

Built-in Contact Check Function

The Contact Check function makes it simple to verify good device-under-test connections quickly and easily before an automated test sequence begins. This eliminates the measurement errors and false product failures associated with contact fatigue, breakage, contamination, loose or broken connections, relay failures, etc.

Powerful Software Tools

In addition to the embedded TSP Express and optional ACS Basic Edition software, the free Test Script Builder software tool is provided to help users create, modify, debug, and store TSP test scripts. Table 1 describes key features of Series 2600A software tools.

Complete Automated System Solutions

While the ACS Basic Edition software only supports component characterization tests, wafer and cassette level testing can be performed by Keithley's ACS Integrated Test Systems. ACS systems are highly configurable, instrument-based systems that generally include a number of Series 2600A instruments. These systems are designed for semiconductor device characterization, reliability/WLR, parametric, and component functional testing.

The flexible software architecture of ACS Basic Edition allows configuring systems with a wide range of controllers and test fixtures, as well as the exact number of SourceMeter instruments the application requires.

SPECIFICATION CONDITIONS

This document contains specifications and supplemental information for the Models 2601A and 2602A System SourceMeter® instruments. Specifications are the standards against which the Models 2601A and 2602A are tested. Upon leaving the factory, the 2601A and 2602A meet these specifications. Supplemental and typical values are non-warranted, apply at 23°C, and are provided solely as useful information.

Accuracy specifications are applicable for both normal and high capacitance modes. The source and measurement accuracies are specified at the SourceMeter CHANNEL A (2601A and 2602A) or SourceMeter CHANNEL B (2602A) terminals under the following conditions:

1. 23°C ± 5°C, <70% relative humidity
2. After 2 hour warm-up
3. Speed normal (1 NPLC)
4. A/D auto-zero enabled
5. Remote sense operation or properly zeroed local operation
6. Calibration period = 1 year

1μA Range: <2.5ms typical.

100nA Range: <25ms typical.

DC FLOATING VOLTAGE: Output can be floated up to ±250VDC from chassis ground.

REMOTE SENSE OPERATING RANGE¹¹:

Maximum voltage between HI and SENSE HI = 3V.

Maximum voltage between LO and SENSE LO = 3V.

VOLTAGE OUTPUT HEADROOM:

40V Range: Max. output voltage = 42V – total voltage drop across source leads (maximum 1Ω per source lead).

6V Range: Max. output voltage = 8V – total voltage drop across source leads (maximum 1Ω per source lead).

OVER TEMPERATURE PROTECTION: Internally sensed temperature overload puts unit in standby mode.

VOLTAGE SOURCE RANGE CHANGE OVERSHOOT: <300mV + 0.1% of larger range (typical). Overshoot into an 100kΩ load, 20MHz BW.

CURRENT SOURCE RANGE CHANGE OVERSHOOT: <5% of larger range + 300mV/R_{load} (typical with source settling set to SETTLE_SMOOTH_100NA). See Current Source Output Settling Time for additional test conditions.

NOTES

1. Add 50μV to source accuracy specifications per volt of HI lead drop.
2. High Capacitance Mode accuracy is applicable at 23°C ± 5°C only.
3. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
4. For sink mode operation (quadrants II and IV), add 0.06% of limit range to the corresponding current limit accuracy specifications. Specifications apply with sink mode operation enabled.
5. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
6. 10A range accessible only in pulse mode.
7. High Capacitance Mode accuracy is applicable at 23°C ± 5°C only.
8. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
9. For sink mode operation (quadrants II and IV), add 10% of compliance range and ±0.02% of limit setting to corresponding voltage source specification. For 100mV range add an additional 60mV of uncertainty.
10. Add 150μs when measuring on the 1A range.
11. Add 50μV to source accuracy specifications per volt of HI lead drop.

SPECIFICATION CONDITIONS

This document contains specifications and supplemental information for the Models 2611A and 2612A System SourceMeter® instruments. Specifications are the standards against which the Models 2611A and 2612A are tested. Upon leaving the factory the 2611A and 2612A meet these specifications. Supplemental and typical values are non-warranted, apply at 23°C, and are provided solely as useful information.

Accuracy specifications are applicable for both normal and high capacitance modes.

The source and measurement accuracies are specified at the SourceMeter CHANNEL A (2611A and 2612A) or SourceMeter CHANNEL B (2612A) terminals under the following conditions:

- 23°C ± 5°C, <70% relative humidity.
- After 2 hour warm-up.
- Speed normal (1 NPLC).
- A/D auto-zero enabled.
- Remote sense operation or properly zeroed local sense operation.
- Calibration period = 1 year.

DC FLOATING VOLTAGE: Output can be floated up to ±250VDC from chassis ground.

REMOTE SENSE OPERATING RANGE¹¹: Maximum voltage between HI and SENSE HI = 3V. Maximum voltage between LO and SENSE LO = 3V.

VOLTAGE OUTPUT HEADROOM:

200V Range: Max. output voltage = 202.3V – total voltage drop across source leads (maximum 1Ω per source lead).

20V Range: Max. output voltage = 23.3V – total voltage drop across source leads (maximum 1Ω per source lead).

OVER TEMPERATURE PROTECTION: Internally sensed temperature overload puts unit in standby mode.

VOLTAGE SOURCE RANGE CHANGE OVERSHOOT: <300mV + 0.1% of larger range (typical). Overshoot into a 200kΩ load, 20MHz BW.

CURRENT SOURCE RANGE CHANGE OVERSHOOT: <5% of larger range + 300mV/R_{load} (typical – With source settling set to SETTLE_SMOOTH_100NA). See Current Source Output Settling Time for additional test conditions.

NOTES

- Add 50μV to source accuracy specifications per volt of HI lead drop.
- High Capacitance Mode accuracy is applicable at 23°C ± 5°C only.
- Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
- For sink mode operation (quadrants II and IV), add 0.06% of limit range to the corresponding current limit accuracy specifications. Specifications apply with sink mode operation enabled.
- Accuracy specifications do not include connector leakage. Derate accuracy by V_{out}/2E11 per °C when operating between 18°–28°C. Derate accuracy by V_{out}/2E11 + (0.15V_{out}/2E11) per °C when operating <18°C and >28°C.
- Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
- 10A range accessible only in pulse mode.
- High Capacitance Mode accuracy is applicable at 23°C ± 5°C only.
- Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
- For sink mode operation (quadrants II and IV), add 10% of compliance range and ±0.02% of limit setting to corresponding voltage source specification. For 200mV range add an additional 120mV of uncertainty.
- Add 50μV to source accuracy specifications per volt of HI lead drop.

System SourceMeter® Instruments

SPECIFICATION CONDITIONS

This document contains specifications and supplemental information for the Models 2635A and 2636A System SourceMeter® instruments. Specifications are the standards against which the Models 2635A and 2636A are tested. Upon leaving the factory the 2635A and 2636A meet these specifications. Supplemental and typical values are non-warranted, apply at 23°C, and are provided solely as useful information.

Accuracy specifications are applicable for both normal and high capacitance modes.

The source and measurement accuracies are specified at the SourceMeter CHANNEL A (2635A and 2636A) or SourceMeter CHANNEL B (2636A) terminals under the following conditions:

- 23°C ± 5°C, <70% relative humidity.
- After 2 hour warm-up
- Speed normal (1 NPLC)
- A/D auto-zero enabled
- Remote sense operation or properly zeroed local sense operation
- Calibration period = 1 year

VOLTAGE PROGRAMMING ACCURACY¹

Range	Programming Resolution	Accuracy (1 Year) 23°C ± 5°C ±(% rdg. + volts)	Typical Noise (peak-peak) 0.1Hz–10Hz
200.000 mV	5 μV	0.02% + 375 μV	20 μV
2.00000 V	50 μV	0.02% + 600 μV	50 μV
20.0000 V	500 μV	0.02% + 5 mV	300 μV
200.000 V	5 mV	0.02% + 50 mV	2 mV

TEMPERATURE COEFFICIENT (0°–18°C and 28°–50°C)²: ±(0.15 × accuracy specification)/°C. Applicable for normal mode only. Not applicable for high capacitance mode.

MAXIMUM OUTPUT POWER AND SOURCE/SINK LIMITS³: 30.3W per channel maximum. ±20.2V @ ±1.5A, ±202V @ ±100mA, four quadrant source or sink operation.

VOLTAGE REGULATION: Line: 0.01% of range. Load: ±(0.01% of range + 100μV).

NOISE 10Hz–20MHz: <20mV pk-pk (typical), <3mV rms (typical), 20V range.

CURRENT LIMIT/COMPLIANCE⁴: Bipolar current limit (compliance) set with single value. Minimum value is 100pA. Accuracy is the same as current source.

OVERSHOOT: ≤±(0.1% + 10mV) typical (step size = 10% to 90% of range, resistive load, maximum current limit/compliance).

GUARD OFFSET VOLTAGE: <4mV (current <10mA).

TEMPERATURE COEFFICIENT (0°–18°C and 28°–50°C)⁷: ±(0.15 × accuracy specification)/°C. Applicable for normal mode only. Not applicable for high capacitance mode.

MAXIMUM OUTPUT POWER AND SOURCE/SINK LIMITS⁸: 30.3W per channel maximum. ±1.515A @ ±20V, ±101mA @ ±200V, four quadrant source or sink operation.

CURRENT REGULATION: Line: 0.01% of range. Load: ±(0.01% of range + 100pA).

VOLTAGE LIMIT/COMPLIANCE⁹: Bipolar voltage limit (compliance) set with a single value. Minimum value is 20mV. Accuracy is the same as voltage source.

OVERSHOOT: ≤±0.1% typical (step size = 10% to 90% of range, resistive load, maximum current limit/compliance; see Current Source Output Settling Time for additional test conditions).

ADDITIONAL SOURCE SPECIFICATIONS

TRANSIENT RESPONSE TIME: <70μs for the output to recover to within 0.1% for a 10% to 90% step change in load.

VOLTAGE SOURCE OUTPUT SETTLING TIME: Time required to reach within 0.1% of final value after source level command is processed on a fixed range.

Range	Settling Time
200 mV	<50 μs (typical)
2 V	<50 μs (typical)
20 V	<110 μs (typical)
200 V	<700 μs (typical)

CURRENT SOURCE OUTPUT SETTLING TIME: Time required to reach within 0.1% of final value after source level command is processed on a fixed range. Values below for I_{out} · R_{load} = 2V unless noted.

Current Range	Settling Time
1.5 A – 1 A	<120 μs (typical) (R _{load} > 6Ω)
100 mA – 10 mA	<80 μs (typical)
1 mA	<100 μs (typical)
100 μA	<150 μs (typical)
10 μA	<500 μs (typical)
1 μA	<2 ms (typical)
100 nA	<20 ms (typical)
10 nA	<40 ms (typical)
1 nA	<150 ms (typical)

DC FLOATING VOLTAGE: Output can be floated up to ±250VDC.

REMOTE SENSE OPERATING RANGE¹⁰: Maximum voltage between HI and SENSE HI = 3V. Maximum voltage between LO and SENSE LO = 3V.

VOLTAGE OUTPUT HEADROOM:

200V Range: Max. output voltage = 202.3V – total voltage drop across source leads (maximum 1Ω per source lead).

20V Range: Max. output voltage = 23.3V – total voltage drop across source leads (maximum 1Ω per source lead).

OVER TEMPERATURE PROTECTION: Internally sensed temperature overload puts unit in standby mode.

VOLTAGE SOURCE RANGE CHANGE OVERSHOOT: <300mV + 0.1% of larger range (typical). Overshoot into a 200kΩ load, 20MHz BW.

CURRENT SOURCE RANGE CHANGE OVERSHOOT: <5% of larger range + 300mV/R_{load} (typical) – With source settling set to SETTLE_SMOOTH_100NA). See Current Source Output Settling Time for additional test conditions.

NOTES

1. Add 50µV to source accuracy specifications per volt of HI lead drop.
2. High Capacitance Mode accuracy is applicable at 23°C ±5°C only.
3. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
4. For sink mode operation (quadrants II and IV), add 0.06% of limit range to the corresponding current limit accuracy specifications. Specifications apply with sink mode operation enabled.
5. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
6. 10A range accessible only in pulse mode.
7. High Capacitance Mode accuracy is applicable at 23°C ±5°C only.
8. Full power source operation regardless of load to 30°C ambient. Above 30°C and/or power sink operation, refer to "Operating Boundaries" in the Series 2600A Reference Manual for additional power derating information.
9. For sink mode operation (quadrants II and IV), add 10% of compliance range and ±0.02% of limit setting to corresponding voltage source specification. For 200mV range add an additional 120mV of uncertainty.
10. Add 50µV to source accuracy specifications per volt of HI lead drop.
11. Times measured from the start of pulse to the start off-time; see figure below.

12. Thermally limited in sink mode (quadrants II and IV) and ambient temperatures above 30°C. See power equations in the Reference Manual for more information.
13. Voltage source operation with 1.5 A current limit.
14. Typical performance for minimum settled pulse widths:

Source Value	Load	Source Settling (% of range)	Min. Pulse Width
5 V	0.5 Ω	1%	300 µs
20 V	200 Ω	0.2%	200 µs
180 V	180 Ω	0.2%	5 ms
200 V (1.5 A Limit)	200 Ω	0.2%	1.5 ms
100 mA	200 Ω	1%	200 µs
1 A	200 Ω	1%	500 µs
1 A	180 Ω	0.2%	5 ms
10 A	0.5 Ω	0.5%	300 µs

Typical tests were performed using remote operation, 4W sense, and best, fixed measurement range. For more information on pulse scripts, see the Series 2600A Reference Manual.

15. Times measured from the start of pulse to the start off-time; see figure below.

GENERAL

IEEE-488: IEEE-488.1 compliant. Supports IEEE-488.2 common commands and status model topology.

RS-232: Baud rates from 300bps to 115200bps. Programmable number of data bits, parity type, and flow control (RTS/CTS hardware or none). When not programmed as the active host interface, the SourceMeter instrument can use the RS-232 interface to control other instrumentation.

ETHERNET: RJ-45 connector, LXI Class C, 10/100BT, no auto MDIX.

EXPANSION INTERFACE: The TSP-Link expansion interface allows TSP enabled instruments to trigger and communicate with each other.

Cable Type: Category 5e or higher LAN crossover cable.

Length: 3 meters maximum between each TSP enabled instrument.

LXI COMPLIANCE: LXI Class C 1.2.

LXI TIMING: Total Output Trigger Response Time: 245µs min., 280µs typ., (not specified) max. Receive LAN[0-7] Event Delay: Unknown. Generate LAN[0-7] Event Delay: Unknown.

DIGITAL I/O INTERFACE:

Connector: 25-pin female D.

Input/Output Pins: 14 open drain I/O bits.

Absolute Maximum Input Voltage: 5.25V.

Absolute Minimum Input Voltage: –0.25V.

Maximum Logic Low Input Voltage: 0.7V, +850µA max.

Minimum Logic High Input Voltage: 2.1V, +570µA.

Maximum Source Current (flowing out of Digital I/O bit): +960µA.

Maximum Sink Current @ Maximum Logic Low Voltage (0.7V): –5.0mA.

Absolute Maximum Sink Current (flowing into Digital I/O pin): –11mA.

5V Power Supply Pin: Limited to 600mA, solid state fuse protected.

Safety Interlock Pin: Active high input. >3.4V @ 24mA (absolute maximum of 6V) will be externally applied to this pin to ensure 200V operation. This signal is pulled down to chassis ground with a 10kΩ resistor. 200V operation will be blocked when the INTERLOCK signal is <0.4V (absolute minimum –0.4V). See figure below:

USB: USB 1.0 Host Controller (Memory Stick I/O).

POWER SUPPLY: 100V to 250VAC, 50–60Hz (auto sensing), 240VA max.

COOLING: Forced air. Side intake and rear exhaust. One side must be unobstructed when rack mounted.

EMC: Conforms to European Union Directive 2004/108/EEC, EN 61326-1.

SAFETY: Conforms to European Union Directive 73/23/EEC, EN 61010-1, and UL 61010-1.

DIMENSIONS: 89mm high × 213mm wide × 460mm deep (3½ in × 8½ in × 17½ in). Bench Configuration (with handle and feet): 104mm high × 238mm wide × 460mm deep (4½ in × 9½ in × 17½ in).

WEIGHT: 2635A: 4.75kg (10.4 lbs). 2636A: 5.50kg (12.0 lbs).

ENVIRONMENT: For indoor use only. **Altitude:** Maximum 2000 meters above sea level.

Operating: 0°–50°C, 70% R.H. up to 35°C. Derate 3% R.H./°C, 35°–50°C.

Storage: –25°C to 65°C.

- Display source and limit settings
- Show current and voltage measurements
- View measurements stored in dedicated reading buffers

Keypad Operations:

- Change host interface settings
- Save and restore instrument setups
- Load and run factory and user defined test scripts (i.e. sequences) that prompt for input and send results to the display
- Store measurements into dedicated reading buffers

PROGRAMMING: Embedded Test Script Processor (TSP) accessible from any host interface. Responds to individual instrument control commands. Responds to high speed test scripts comprised of instrument control commands and Test Script Language (TSL) statements (e.g. branching, looping, math, etc.). Able to execute high speed test scripts stored in memory without host intervention.

Minimum Memory Available: 16MB (approximately 250,000 lines of TSL code).

Test Script Builder: Integrated development environment for building, running, and managing TSP scripts. Includes an instrument console for communicating with any TSP enabled instrument in an interactive manner. Requires:

- VISA (NI-VISA included on CD)
- Microsoft .NET Framework (included on CD)
- Keithley I/O Layer (included on CD)
- Pentium III 800MHz or faster personal computer
- Microsoft Windows 98, NT, 2000, or XP

Software Interface: TSP Express (embedded), Direct GPIB/VISA, READ/WRITE for VB, VC/C++, LabVIEW, LabWindows/CVI, etc.

READING BUFFERS: Dedicated storage area(s) reserved for measurement data. Reading buffers are arrays of measurement elements. Each element can hold the following items:

- Measurement
- Measurement status
- Timestamp
- Source setting (at the time the measurement was taken)
- Range information

Two reading buffers are reserved for each SourceMeter channel. Reading buffers can be filled using the front panel STORE key and retrieved using the RECALL key or host interface.

Buffer Size, with timestamp and source setting: >60,000 samples.

Buffer Size, without timestamp and source setting: >140,000 samples.

SYSTEM EXPANSION: The TSP-Link expansion interface allows TSP enabled instruments to trigger and communicate with each other. See figure below:

Each SourceMeter instrument has two TSP-Link connectors to facilitate chaining instruments together.

- Once SourceMeter instruments are interconnected via TSP-Link, a computer can access all of the resources of each SourceMeter instrument via the host interface of any SourceMeter instrument.
- A maximum of 32 TSP-Link nodes can be interconnected. Each SourceMeter instrument consumes one TSP-Link node.

TIMER: Free running 47-bit counter with 1MHz clock input. Reset each time instrument powers up. Rolls over every 4 years.

Timestamp: TIMER value automatically saved when each measurement is triggered.

Resolution: 1 μ s.

Accuracy: \pm 100ppm.
